

Kiều Quang
.**Net Developer**
Fresher

As a dedicated and detail-oriented back-end developer specializing in .NET technologies, I aim to leverage my strong foundation in software development, system architecture, and API design to build scalable and high-performance applications. My objective is to contribute to a dynamic development team where I can continuously grow my technical skills, apply best practices in clean code and system optimization, and play a key role in delivering reliable, maintainable, and secure back-end solutions that support business success.

Developer • FPT Software

JITS - Nasage Newton | Jun 2024 - Jun 2025

- **Team Size:** 450 members
- **Technology Stack:** Angular, .Net Framework, Oracle SQL
- **Role:** Developer, Tester
- **Description:**
 - Participated in maintaining and enhancing a web-based system to replace the legacy warehouse management system built with WinForms, aiming to improve performance, user experience, and data consistency.
 - Participate in analyzing requirements and designing software systems.
 - Perform tests, fix bugs, and improve application performance.
- **Responsibility:**
 - Documentation:
 - Write detailed design documents to specify system functionality and technical implementation.
 - Create technical documentation for APIs, database schemas, and system architecture.
 - Document the deployment and integration process.
 - Development:
 - Develop and enhance front-end features using Angular, ensuring usability and performance.
 - Create and manage test data using Oracle SQL to support development activities.
 - Work with C# WinForms and .NET to debug and maintain old applications.
 - Testing:
 - Perform testing and debugging to identify and resolve issues effectively.
 - Debug the old system and map its functionalities with the new system to ensure consistency.
- **Achievement:**
 - Contributed to identifying and resolving 100+ UI/UX bugs, enhancing user experience on both web and mobile platforms.
 - Actively participated in sprint planning and technical meetings, proposing solutions that improved task estimation accuracy and system design consistency.

OITSUKI - JPRO4 | Mar 2023 - Jun 2024

- **Team Size:** 972 members
- **Technology Stack:** React, .Net Framework, SQL Server
- **Role:** Developer, Tester
- **Description:**
 - Developing a new order management system on Nichouzai's web stores to comprehensively improve the old system that has developed on VB6.
 - Maintained and developed a prescription management system for a Japanese client, migrating from a legacy desktop application to a modern web-based platform to improve performance and user experience.
- **Responsibility:**
 - Developed front-end components using Angular to build a modern, responsive interface for the new order management system.
 - Implemented backend services and APIs using .NET to handle order processing and data synchronization with SQL Server.
 - Managed source code versioning and branching strategies using Git, ensuring team-wide consistency and safe code integration.
 - Took ownership of deployment activities to test and production environments, coordinating closely with DevOps team.
 - Collaborated with testers to debug and resolve issues, ensuring smooth migration from the old system.
- **Achievement:**
 - Standardized Git workflow and source code management, reducing integration conflicts and improving team productivity.
 - Rewrote complex business logic from legacy VB6 system into .NET APIs, ensuring 100% functional parity with improved maintainability.
 - Recognized by team lead for reliability in critical deployment and code management tasks.

Học vấn

FPT University

Software engineering • Sep 2019 - Sep 2025

Software engineer with a strong foundation in programming, system design, and web/API development. Experienced in working with modern technologies such as .NET, React, and SQL Server. Skilled in problem-solving, teamwork, and writing clean, maintainable code. Passionate about learning new technologies and building high-quality, scalable software solutions.
